

RCI 8000 Series SPFH Attachments

Attachments for John Deere 8000 Series Self-Propelled Forage Harvesters

- 812A Combine Header Adapter
- 8A Bumper Attachment

KEEP MOVING FORWARD

RCI Attachments for John Deere 8000 Series Self-Propelled Forage Harvesters

The **RCI 812A Header Adapter** is intended to be used to adapt John Deere C-Series, 40-Series, and 90-Series corn headers to the John Deere 8000 Series Self-Propelled Forage Harvesters (SPFH). This adapter is intended for up to 12-row non-chopping headers and up to 8-row chopping headers. The 812A is compatible with the quick-connect driveline option on the SPFH. The feeding drum is movable and can be allowed to float, if desired, for different crop conditions. Feeding drum bars are replaceable and can use John Deere service parts.

Product Highlights:

- Dual gearboxes for reliable operation in the most demanding conditions.
- Jack stands and shipping/storage stands allow for the adapter to be removed independently or retained on the corn head for transport.
- Adapter is compatible with the quick-attach system, all tire configurations and spacings.

The **RCI 8A Bumper Adapter** provides a bumper and ballast for the SPFH to allow for ease of installation of larger headers. The weight rack section of the bumper can be removed and the bumper plate re-installed to provide protection for the back of the machine from trucks during opening passes in the field.

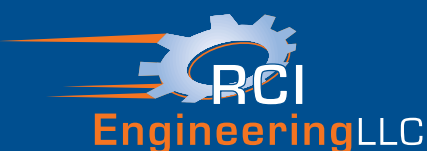

Product Highlights:

- Overall package allows for more cost-effective ballast solution than factory weights and a custom-built bumper for each customer.
- Modular design allows for removal of the weight rack and reinstallation of the bumper when using hay pickups.
- Fork lift pockets and lift point locations are provided to ease removal of weight rack and bumper when switching between hay pickups and corn heads.
- Adjustable bumper height allows for ground clearance from approximately 12-21 inches, depending on tire options of the SPFH.
- Weight rack fits traditional John Deere suitcase weights and bumper features mount for two strap at rear.
- Saves fuel when using a hay pickup as unnecessary weight can be removed easily.
- Weight rack sold separately.
