RCI Custom Research Plot Equipment
Engineered to Your Specs

RCI develops custom plot equipment for each customer’s needs. RCI has several existing platforms to build to your exact needs and can develop new platforms as needed.

From concept to field, RCI develops solutions entirely in-house and delivers products complete after testing with manuals and product support.

Specialties include:
- Plot Harvesting
- Product Application
- NIR Sensor Adaptation
- Plot Treatment
- Sample Processing

RCI also offers modifications and add-on solutions to existing equipment. Call today to find out how RCI can build the equipment designed to fit your specific needs!

Research Plot Harvester

RCI is a provider of Research Plot Harvesters for hay, forage, and biomass. Products include:
- 36A and 48A Harvesters for use on front mowers
- 30A and 130S Plot Samplers for use on Self-Propelled Forage Harvesters
- 1250P Self-Propelled Forage Harvester
- RCI Aurora NIR portable NIR analyzer

These products allow the harvest of plots while recording necessary data using RCI’s PlotPro software. RCI also integrates NIR sensors to plot harvesters for the recording of constituents based on customer needs. For complete product details visit us at www.rciengineering.com.
